

Color Ink PP NITRO

Description

COLOR INKS PP NITRO are nitrocellulosic inks in solvent solution (ethyl acetate, isopropyl alcohol).

Application

COLOR INKS PP NITRO are specifically developed to print PP adhesive tapes (all types: solvent, hot melt and acrylic) with the three stations printing process (primer, ink, release). Their special formulation is insoluble in the release solvent and it allows a high speed printing process.

Handling

COLOR INKS PP NITRO are ready to be used. They can be used directly on SIAT L36 printing machine (or similar) with our PRIMER EPX-2 and our RELEASE PP 25 DIL. They can be slightly diluted with DILUENT C NITRO (Ethyl acetate). They can be added with RETARDER C NITRO (methoxy-propanol) to reduce evaporation.

Packing

Standard packaging is 10 Kg metal drum, but on request 20 Kg metal drum is available.

Storing

Shelf life is over 6 months, when properly stored at temperatures between +20°C and +40°C.
