Ancorante PVC

Description

ANCORANTE PVC is a special additive for PVC adhesive tapes printing inks.

Application

ANCORANTE PVC is designed to be used when problems of ink transfer to the adhesive side of the PVC tapes occur.

Handling

ANCORANTE PVC must be added to PVC inks before starting the printing process. Add no more than 2-3% on ink weight. We suggest to dilute it with DILUENT C PVC (MEK), before adding it to the ink. This operation must be made in a proper container, not directly in the printing machine vessel.
The exact quantity to add depends on the intensity transfer of ink.

Packaging

20 Kg metal drums.

Storing

Shelf life is 6 months.
Keep the product in a safe and cool place.

Use within 6 months from production date (unopened and in the original packaging).

Build date 11 Sep 2025
