

usually it is 0.5-2%.

Packaging

Storing

isocyanate (e.g. CURING AGENT RF/AEDE); in this case the pot-life of the adhesive is reduced as

crosslinking starts immediately after the addition of the curing agent. The amount of isocyanate

depends on the final requested characteristics,

The product is supplied in iron drums (145 kg).

Use within 12 months from production date

(unopened and in the original packaging).

Tacksol 10/83 EPM

#### Description

TACKSOL 10/83 EPM is a high performance solvent-born pressure sensitive adhesive, based on natural and synthetic rubbers and special resins. It has a very good resistance to ageing, light and heat, much higher than standard adhesives based on natural rubber only.

# Application

TACKSOL 10/83 EPM can be applied on any substrate (paper, PET, PP, PE, PVC). It is recommended for the production of protective films and tapes.

### **Technical Specifications**

Method of analysis	MU	Standard
1. Total Solids 3. Brookfield Viscosity 25°C Solvents	% mPa.s	17 350 - 650 <sup>(I)</sup> heptane
<sup>(1)</sup> N. 2 RV; 20 RPM		

## **Film properties**

Method of analysis	MU	Standard
11. Peel Adhesion on Steel	g/in	1,000
17. Rolling Ball Tack 97. Loop Tack Test	cm g	3 1,500

Average values; 22 $\pm$ 2 g/m<sup>2</sup> of dry adhesive on PET film 36  $\mu$ m

#### Handling

When heat or mechanical resistance must be increased, it is necessary to cure the product with
