

COLOR INK RPVC

(Provisional)

Description

COLOR INKS RPVC are solvent based inks, formulated with particular pigments to print on extensible and thermoretractable PVC film.

Application

Printing of PVC P.S.A. tapes.

COLOR INK RPVC peculiar characteristics are: excellent brightness, excellent printability, good water resistance and low solvent retention (after correct drying).

Technical Specifications

Method of analysis	MU	Standard
Solvents		ethylacetate

Handling

The ink can be applied by flexoprint or rotogravure.

Dilution can be made with a mixture of ethanol and ethylacetate. The ink is supplied ready to use, but it can be diluted to obtain a better fluidity or for retarding the drying (usually in the hot season).

As retarding agent, we suggest our RITARDANTE C NITRO. Quantity to add is flexible and experience will allow you to find the best concentration.

Packaging

COLOR INKS RPVC are supplied in 10 or 20 kg drums.

Storing

Product must be stored at temperature not higher than 30°C. Product is flammable. Shelf life is 6 months.
