

Release K 100 H Dil.1 Eco

(Provisional)

Description

RELEASE K 100 H DIL. 1 ECO is a polyvinylcarbamate in solvent solution. It does not contain aromatic solvents.

Application

The product is a very efficient release agent for PP, PE, PVC, reinforced PVC and PET film with natural, synthetic rubber and acrylic adhesives. It is also designed to be employed in the three steps printing process of PSA tapes, when aromatic solvents cannot be used.

Technical Specifications

Method of analysis	MU	Standard
1. Total Solids Solvents	%	1±0.10 octane / isopropyl alcohol

Handling

Apply 3-5 g/sqm of **RELEASE K 100 H DIL. 1 ECO** as such or after dilution. Drying must be very efficient, in order to avoid any solvent residue. It can be used on corona treated as well as on untreated films.

Packaging

The product is supplied in iron drums (160 kg); ADR compliant IBC containers (750 kg).

Storing

Product must be stored at temperatures higher than +18°C, far from direct sunlight.

Use within 12 months from production date (unopened and in the original packaging).

Notes

RELEASE K 100 H DIL. 1 ECO tends to jellify when stored at temperatures below +20°C: the solution becomes hazy and some material settles down to the bottom of the container. Original conditions must be restored before use. Just heat the product at 35-40°C and stir to complete homogeneity.
