

Curing Agent SR

(Provisional)

Description

CURING AGENT SR is an innovative crosslinker in aliphatic solution, designed to cure solvent borne rubber adhesives.

Application

CURING AGENT SR is suggested as substitute of MDI crosslinking agents in the production of protective films with solvent rubber adhesives, being less dangerous for the health and having a longer pot life.

Technical Specifications

Method of analysis	MU	Standard
16. Active Substance ⁽¹⁾	%	55±1
⁽¹⁾ Theoric evaluation		

Handling

Add 1-3% in the solvent rubber adhesives (on wet weight of a 20% total solids content adhesive), stir well till complete dissolution and coat within 2-3 hours. Pot life depends upon different parameters, such as temperature and concentration.

Packaging

The product is supplied in iron drums (10 kg); plastic drums (20 kg).

Storing

Use within 6 months from production date (unopened and in the original packaging).
