

Color Ink WP

Description

Water-based, bright flexo inks, based on pigments and special synthetic resins.

Application

These inks have been designed for printing the following materials: paper in general, Kraft papers, flavours and animal food bags, Tester-Liner in short-wave or micro-wave, etc.

Handling

Dilution: add approx. 30% WATER.

This proportion depends on material to print, on the drying speed you want to obtain and on the characteristics of the printing.

In case of foam, we suggest to add some suitable defoamer by means of a sprayer.

For a faster drying, add a blend of ethyl-alcohol and water.

For a slower drying, add 1-metoxo 2-propanol.

Packaging

Color Ink WP are supplied in 25 kg drums (on request bigger drums).

Storing

Pot - Life: 6 months.

This product must be stored at temperatures between +10 and +40°C.
