

Diluent C NITRO

Description

Thinner for our **COLOR INK PP NITRO** printing inks series (nitrocellulose series for the three-steps printing process of the PP).

Application

Our **COLOR INK PP NITRO** ink series is supplied "ready for use", therefore it does not normally require the addition of diluent.

DILUENT C NITRO can be added at the discretion of the user to obtain a better fluidity of the ink. Addition is necessary if the ink becomes too sticky. This can happen as a result of the evaporation of the solvent in the ink during use (opening / closing of the drums).

Technical Specifications

Method of analysis	MU	Standard
Solvents		ethylacetate

Handling

Add the product being careful not to use too much, as this may compromise the print quality.

Packaging

The product is supplied in metal drums (15 kg).

Storing

Store the product away from heat sources and away from any source of ignition.

Use within 12 months from production date (unopened and in the original packaging).
