

Tacksol 10/88

Description

TACKSOL 10/88 is a solvent pressure sensitive adhesive, based on natural rubber and special resins. It has excellent wetting properties on various substrates.

Application

TACKSOL 10/88 can be applied on various substrates (paper, PET, PP, PE, PVC,...). This product is recommended for the production of protective p.s. films and tapes. It is a soft product, designed for low coating weight applications.

Technical Specifications

Method of analysis	MU	Standard
1. Total Solids	%	32±1
3. Brookfield Viscosity 25°C	mPa.s	8,000 - 10,000 ⁽¹⁾
Solvents		heptane

⁽¹⁾ N. 5 RV; 20 RPM

Film properties

Method of analysis	MU	Standard
11. Peel Adhesion on Steel	g/in	1,700
17. Rolling Ball Tack	cm	3

Average values; 22±2 g/m² of dry adhesive on PET film 36 µm

Handling

TACKSOL 10/88 can be diluted with aliphatic and/or aromatic solvents to obtain the desired viscosity. When used for protective film production,

it is necessary to cure the product with CURING AGENT D (0.2-1%). In this case, the pot-life of the adhesive is reduced, as crosslinking starts immediately after the addition of the curing agent.

Packaging

The product is supplied in iron drums (145 kg).

Storing

Store at temperatures between +5 and + 40°C in well closed containers. Keep far from heat sources and direct sunlight.

Use within 12 months from production date (unopened and in the original packaging).
