Flamestop 6

(Provisional)

Description

FLAMESTOP 6 is a fire-retardant additive in water dispersion. It is halogen and heavy metals-free.

Application

FLAMESTOP 6 is designed to work as fire-retardant in polyurethane and acrylic emulsions.

Technical Specifications

Method of analysis	MU	Standard
8. pH		7 - 9
Solvents		water

Handling

Add not less than 20% on total solid content of the resin, in order to achieve the best fire-retardant effect.
The product tends to separate; stir well before use.

Storing

Store at temperatures between +5 and +40 °C, in well closed containers.
In case of prolonged storage, product must be stirred periodically, so to avoid separation and precipitation.

Use within 12 months from production date (unopened and in the original packaging).

Build date 11 Sep 2025

Above information is reliable, but does not constitute warranty.
